- ✓ **Integration** with other back-office systems brings information together from across the enterprise

- ✓ **Rules-based e-mail alerts** and notification system

- ✓ **Adapt quickly** to changing business conditions with user-definable data points and metrics

Risk Management that Works

Whether the initiatives in your organization are targeted prevention of specific losses or big picture enterprise risk management, tracking, managing, and analyzing your incidents and losses is a key requirement.

APP's unique incident-based approach to claims management represents a departure from traditional systems in that data is captured in an organic way - accommodating the natural flow of data from the field into your office.

Unlimited data mining is possible with hundreds of in-depth reports and APP's ad hoc PowerExport reporting tool, which facilitates your broader risk identification and management strategies, whether they are based on objectives, scenarios, and/or taxonomy.

APP's suite of risk management solutions helps you identify risks, analyze contributing factors, implement a plan of action, and then track and manage its results effectively.

rise to the challenge.

"...we have seen our accident frequency drop 31 percent."

Raymond Turner, CFO
Greater Houston Transportation Co.

APPTechnologies LLC

Identify — Spot loss trends and identify root causes.

Analyze — Pivot and analyze data to reveal corollary factors and perform fault analyses.

Plan — Use new information and reporting tools to develop a comprehensive risk management strategy.

Track — Add new data collection points and business rules to gain more detail and track the implementation of your plan.

Manage — Automatic alerts and notifications keep you on top of events and give you advance opportunity to mitigate risk.
