Electronic First Report: Information. Quickly.

Getting timely notification of accidents is the first (and sometimes largest) hurdle for claims managers: at least it used to be. Electronic First Report (eFR) collects accurate, detailed incident reports from the field quickly via the web. eFR shares its database with APP's powerful Incident Management System (IMS). This means that risk managers and adjusters have instant access to new accident information, complete with photographs and e-mail notification.

eFR is also equipped with online reporting so users have access to detailed reports based on the latest claims data.

With an emphasis on speed and ease of use, eFR is easy to learn and can be deployed rapidly to a large number of users. Geared for users who may not be intimately familiar with claims jargon, eFR simplifies the data entry process but insures the full detail needed by back-office claims experts. No other product brings this kind of flexibility to your business as quickly as eFR does.

Benefits

eFR delivers key benefits to optimize your claims operation:

- **Real-time reporting** with 24/7 availability
Internet web-based access
- **Greater information accuracy** with definable business rules and data validated on entry
- **Minimal training required** due to eFR's streamlined, wizard interface
- **Fast return on investment:** research shows that claims reported quickly cost less to settle
- **Fewer forms, less paperwork** with eFR's photograph and document upload feature

Incidents of any type: automobile accidents, worker's compensation cases, thefts, and more can be collected in minutes with excellent detail. Each type of incident has a customizable reporting track to retrieve only the information relevant to that type of incident.

**Superior Claims Management.
It All Starts Here.**

Features

First reporting has never been easier than it is with APP Technologies' Electronic First Report:

- Clean, easy-to-use interface makes learning eFR a snap
- Intuitive reporting Wizard creates a step-by-step process for collecting all the vital information about a claim
- Attachment upload capability for electronic photograph and document capture
- Completed incident reports can be printed from the eFR as a hard-copy or saved to PDF file for distribution and review
- Review and remand features enable a manager to send electronic reports back for more details
- Internal messaging system for secure communication between users
- Shared database with APP's Incident Management System for immediate access to changes from either application
- No client software to install: access eFR from any Internet connection with all popular web browsers
- Automatic e-mail notification system to alert managers to new incidents based on user-defined criteria

Take the complications out of claims reporting with eFR!

Electronic First Report is designed to capture factual information as quickly as possible and eliminate the need to enter redundant information. No other Internet reporting application addresses the wide variety of accident and claims situations as well as eFR does.

Take first reports at any time of the day (or night) with 24/7 availability! Know about accidents, with all the facts, sooner than ever before.

Familiar drop-down boxes keep information consistent and increase the efficiency of reporting while minimizing errors. Upload photos and other attachments, too. Complex forms and time-consuming submission procedures are a thing of the past.

Define software rules that mirror your existing reporting rules; rest assured that your incident reports are accurate.

We can even customize the Wizard to match your specific requirements.
